

HIGHTEC ENGINE CLEANER / MOTORSPÜLUNG

Oil system cleaner for petrol, diesel and gas engines (LPG/CNG). Cleans the entire oil system and loosens sediments and siltation before the oil change.

Description

HIGHTEC ENGINE CLEANER is a highly-effective additive composition that cleans the oil circulation, so it cleans the engine from the inside. It removes the soiling, and the new engine oil remains clean for longer.

HIGHTEC ENGINE CLEANER is also suitable for petrol and diesel engines and can be used for vehicles with and without turbocharger. We recommend the use of HIGHTEC ENGINE CLEANER in LPG/CNG vehicles.

Application

Add HIGHTEC ENGINE CLEANER to the engine oil approx. 400 - 1,000 km before the scheduled oil change. The vehicle can be used normally during this time.

Then perform the oil change as usual. With strong sediments, we recommend an additional filter change in between.

Benefits

- dissolves internal engine sediments and siltation
- reduces the soiling of new engine oil by old sediments
- suited for petrol, diesel and gas engines (LPG/CNG)
- suited for vehicles with and without turbocharger
- highly-effective additive composition
- simple use
- effective cleaning of piston rings - can increase compression
- preventive cleaning of hydraulic lifters - can reduce engine noise
